Turnable upholstery Table Model KTK+ 3-OB:

Beispielbild vom
Hubtisch KTK+ 3OB.

Height positioning system

The table has a height positioning system: when one presses a pedal, the table starts to move, making a 2 seconds pause at a certain point of movement. The height of this pause can be adjusted on a special bar placed under the table. This solution allows upholsterers to work at a comfortable height and eliminates the need of time-consuming adjustments of the height of the table.

Without hydraulic stop system.

Areas of application: → upholstery industries, mattress and chair manufacturing, gluing, assembling and packing of upholstered furniture and their components, or textile materials

Construction: → Massive rectangular steel tube construction with powder coating
→ The automatic drive is foot-controlled at both sides of the table
→ The hydraulic brake system prevents bounce back of the table top during upholstery process

Table top: → A swivel table top with a spring brake system blocks the tabletop after each 90 degrees. The tabletop is made of high quality, water-resistant plywood.
